SUMMARY

Full Stack Developer with hands-on experience building scalable web applications, automation systems, and content-driven platforms using the MERN stack (MongoDB, Express.js, React.js, Node.js). Proven ability to design CMS-driven architectures, develop complex scheduling systems with timezone handling, and integrate third-party services such as Stripe, OpenAI, and Google OAuth 2.0.

Experienced in developing microservices, web scraping pipelines, and AI-powered content automation workflows that reduce manual effort and improve operational efficiency. Strong problem-solving skills with a focus on system design, performance optimisation, and delivering user-friendly solutions. Comfortable working directly with clients and translating business requirements into technical implementations.

EXPERIENCE

Full stack developer

Data zoro

November 2025 - Present, Denver, Colorado

- Collaborated directly with clients and stakeholders to gather, analyze, and document business and technical requirements for multiple software projects.
- Participated in Agile/Scrum ceremonies including daily stand-ups, sprint planning sessions, progress tracking, and cross-functional team coordination.
- Demonstrated strong initiative by proactively volunteering for new responsibilities, learning emerging technologies, and adapting to unfamiliar project requirements.
- Collaborated with cross-functional teams to deliver full stack solutions using React JS, Node.js, and PostgreSQL in time-sensitive settings.
- Managed and contributed to 3–4 concurrent projects simultaneously while maintaining task prioritization, development quality, and timely delivery.
- Coordinated with frontend, backend, and design teams to ensure smooth integration of application features and alignment with client expectations.
- Assisted in identifying technical issues, debugging workflows, and improving development processes to enhance overall project efficiency.
- Contributed to requirement discussions, workflow planning, and solution-oriented development practices within team environments.
- Adapted quickly to changing project scopes, client feedback, and evolving business requirements while maintaining productivity and communication standards.

PROJECT

CMS STYLED ECOMMERCE SITE WITH MANY MORE

Datazor

- Engineered a fully dynamic CMS-driven frontend architecture, allowing admins to modify content (text, media, sections, navigation, CTA links) without developer intervention.
- Implemented modular UI components enabling runtime configuration of layouts, including dual navigation systems and flexible section rendering.
- Designed and developed a booking and scheduling system for coaching workflows, with robust handling of timezone conversions, availability windows, and conflict resolution.
- Debugged and resolved complex scheduling edge cases, ensuring accurate cross-timezone bookings and improved system reliability.
- Built a drag-and-drop email template editor, enabling non-technical users to create and send customized, responsive email campaigns.
- Structured reusable components for dynamic email rendering and template persistence.
- Developed a centralized payment configuration system using Stripe APIs, allowing admins to manage pricing and product metadata directly from the application.
- Eliminated dependency on manual dashboard updates by syncing pricing logic between backend and Stripe.

Social Scrapping Service a microservice

Datazor

- Developed a microservice for automating workflows for platforms like Facebook, significantly reducing manual operational effort.
- Implemented browser automation using GoLogin to manage persistent sessions and securely reuse authenticated profiles without repeated credential input.

News Scrapper

Datazor

- Developed a scalable web scraping service integrated into the platform, allowing admins to input article URLs and automatically extract structured content (text, images, metadata).
- Implemented robust scraping logic to handle dynamic HTML structures, media extraction, and content normalization for consistent downstream processing.

- Integrated AI-based content processing using OpenAI APIs to automatically summarize and reformat scraped articles for publishing workflows.
- Built a pipeline to transform extracted media into social-ready content assets, enabling automated post generation for platforms like Facebook.
- Integrated Google OAuth 2.0 for secure user authentication and authorization.
- Automated data storage and distribution by connecting with Google Sheets and Google Drive APIs for content management and media handling.

EDUCATION

Bachelor in Computer science

IBA • 2025 • 3.1

SKILLS

Front end: HTML, CSS , JAVASCRIPT , REACT JS , TAILWIND CSS , NEXT JS , FIGMA , RTK

Backend: NODE JS , PUPPETEERS JS , EXPRESS JS , RTK .

DATABASE: POSTGRESQL , PRISMAORM , MONGODB , MONGO COMPASS.

EXTRA: GIT, GITHUB, DOCKER , PM2
